Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

PFAS: Sites With Known PFAS Contamination

Perfluoroalkyl and polyfluoroalkyl substances (PFAS) are man-made chemicals, are resistant to heat, water and oil, and persist in the environment and the human body. PFAS are not found naturally in the environment. They have been used to make cookware, carpets, clothing, fabrics for furniture, paper packaging for food, and other materials that are resistant to water, grease, or stains. They are also used in firefighting foams and in a number of industrial processes.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

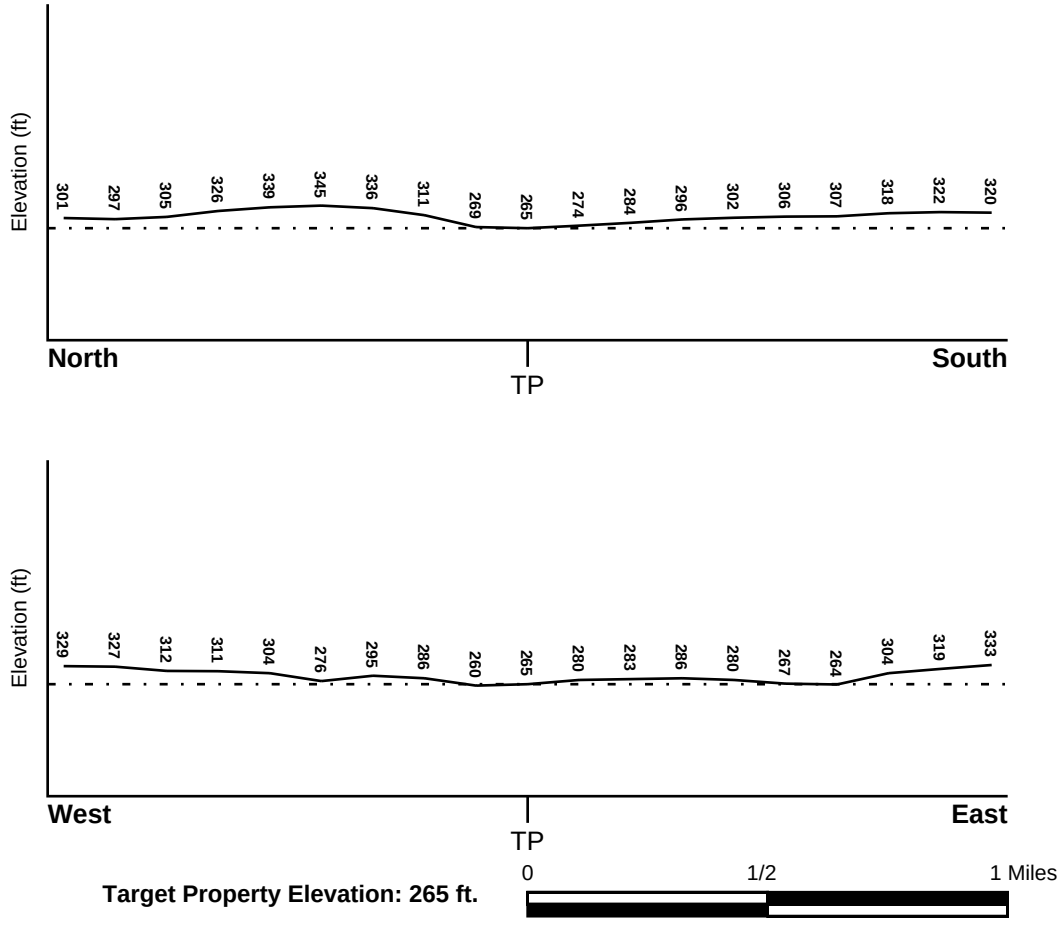
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 265 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

1.0 INTRODUCTION

On behalf of Hanover Industrial LLC (Hanover), The Vertex Companies, LLC (VERTEX) has prepared this Phase II Limited Site Investigation (LSI) for the property located at 56 Walnut Street in Chalfont, Bucks County, Pennsylvania (the subject property).

VERTEX completed a draft Phase I Environmental Site Assessment (ESA) dated June 23, 2025, and identified the following recognized environmental condition (REC):

- Trichloroethene (TCE)-contaminated groundwater, resulting from an off-site source (North Penn – Area 5 Superfund site), was identified on the subject property.

On July 7, 2025, Hanover and VERTEX conducted a conference call with representatives of the United States Environmental Protection Agency (USEPA) and Pennsylvania Department of Environmental Protection (PADEP) to discuss the current conditions and potential impacts on the proposed redevelopment of the subject property.

Based on the draft Phase I ESA findings and discussion with the USEPA/PADEP, VERTEX recommended performing a Phase II LSI to evaluate current groundwater conditions via sampling of the USEPA's existing shallow monitoring wells on the subject property and evaluate potential vapor intrusion concerns.

1.1 Subject Property Description

According to the Bucks County Board of Assessment, the subject property consists of the following:

SUBJECT PROPERTY SUMMARY		
PARCEL ID	**ADDRESS**	**SIZE (ACRES)**
26-001-099	N/A	32.46
26-001-099-001	56 Walnut Street	23.58
26-001-099-002	N/A	14.84
26-001-099-003	N/A	19.17

According to the Bucks County Board of Assessment, the subject property is owned by Elizabeth Nicholas and Siobhan Welsh. The subject property location is shown on **Figure 1**.

1.2 Historical Subject Property Use

Based on review of historical information, it appears that the subject property was developed with two residences and a barn prior to 1938. The subject property has been used as a residence and agricultural land since at least 1938.

1.3 Geology and Hydrogeology

According to the United States Department of Agriculture (USDA) Web Soil Survey, soils at the subject property consist primarily of Reaville channery silt loam, Bowmansville-Knauers silt loam, Abbottstown silt loam, Rowland silt loam, Buckingham silt loam, and Readington silt loam. Reaville channery soils are classified as non-hydric and somewhat poorly drained, and are typically found in drainageways, hillslopes, and uplands. Bowmansville-Knauers soils are classified as non-hydric and somewhat poorly drained and are typically found in floodplains and uplands. Abbottstown soils are classified as non-hydric and somewhat poorly drained and are typically found on hillslopes in piedmonts. Rowland soils are classified as non-hydric and moderately well drained and are typically found in floodplains and uplands. Buckingham soils are classified as non-hydric and somewhat poorly drained and are typically found in drainageways.

Readington soils are classified as non-hydric and moderately well drained, and are typically found on hills, uplands, and piedmonts.

During VERTEX's July 2025 Phase II ESA, groundwater was encountered at depths ranging from approximately 14.41 to 20.01 feet below grade. Based on prior investigations completed at the subject property, groundwater flow on the eastern side of the creek is west-northwest. Groundwater flow on the western side of the creek is inferred to flow east.

1.4 Proposed Redevelopment

Hanover proposes the redevelopment of the subject property with the Chalfont Industrial Park, which will be improved with the following:

- Warehouse Building 1 – approximately 361,150-square foot, slab-on-grade logistics building (warehouse and office) with associated loading spaces and employee parking spaces.

- Warehouse Building 2 – approximately 110,000-square foot, slab-on-grade logistics building (warehouse and office) with associated loading spaces, trailer storage, and employee parking spaces.

- Warehouse Building 3 – approximately 15,500-square foot, slab-on-grade logistics building (warehouse and office) with associated loading spaces, trailer storage, and employee parking spaces.

The layout of the proposed redevelopment is included as **Figure 2**.

2.0 PHASE II LIMITED SITE INVESTIGATION ACTIVITIES

In general conformance with Change Order No. 001 dated July 14, 2025, and in accordance with standard industry protocols and PADEP technical guidelines, VERTEX performed a Phase II LSI of the subject property. On July 24, 2025, VERTEX completed the Phase II LSI activities to determine the current soil gas and groundwater conditions at the subject property.

2.1 Health and Safety Plan

Prior to initiating field activities, a health and safety plan (HASP) was prepared to guide the conduct of the work in the event that regulated constituents were encountered during the performance of the field activities. The purpose of the HASP was to minimize the likelihood of exposure of VERTEX employees to hazardous concentrations of chemicals during field activities, minimize impacts to the environment, and provide safety guidelines for subcontractors. Field activities were completed in accordance with Occupational Safety and Health Administration (OSHA) level D personal protective equipment (PPE), consisting of hard hats, safety glasses, protective gloves, and steel toed boots.

2.2 Utility Clearance and Geophysical Evaluation

As part of the subsurface investigation, VERTEX's drilling subcontractor contacted the Pennsylvania one call system prior to initiating the drilling activities. VERTEX also retained the services of GPRS, LLC (GPRS) to perform a geophysical survey to "clear" proposed soil gas point locations prior to drilling to ensure that they were free of subsurface utilities or structures. GPRS utilized ground penetrating radar (GPR) and electromagnetic (EM) equipment during the survey. The proposed drilling locations were "cleared" by GPRS on July 24, 2025.

A geophysical survey of the entire subject property was not conducted. A geophysical report was not prepared; however, VERTEX was on-site during the investigation to confirm the findings.

2.3 Soil Gas and Ambient Air Sampling

AmeriDrill, Inc. (AmeriDrill) was retained by VERTEX to advance temporary soil gas sampling points at the subject property. On July 24, 2025, a direct-push drill rig was utilized to core to 10.0 feet below grade at seven locations (SV1 to SV7). The sampling locations are depicted on **Figure 3** and were located within the footprint of the proposed buildings. One ambient air sample (AA1) was also collected to evaluate exterior air quality during the sampling event.

A stainless-steel soil gas implant was inserted near the bottom of the borehole. Polyethylene tubing extended from the insert to the surface. Sand was placed to cover the implant and the remaining approximately 5.0 feet of open hole was sealed with bentonite grout to ground surface. In accordance with PADEP guidance, the soil gas sampling points were allowed to equilibrate to natural conditions (minimum of two hours).

A leak check was performed on the entire sample train using a tracer compound (e.g., helium) to confirm sampling methodology at each location. The leak check was performed to ensure that there was less than 10% helium in the purged air.

Prior to sample collection from the gas probe/borehole, three purge volumes were evacuated from the sample train at a flow rate not exceeding 200 milliliters per minute. The soil gas samples were collected using a 2.7-liter stainless-steel Summa canister over a 30-minute sample duration.

It should be noted that only four of the seven proposed soil gas samples were able to be collected during the investigation. Proposed sample locations SV1, SV6, and SV7 were not able to be collected due to either water in the lines, malfunctioning laboratory regulators and/or tight clay

formations that were not generating air flow.

The soil gas samples were analyzed for volatile organic compounds (VOCs) via USEPA Method TO-15 select ion monitoring (SIM).

To evaluate the potential influence from outdoor sources, one ambient air sample (AA1) was collected in conjunction with the soil gas samples. The ambient air sample was collected using a 2.7-liter stainless-steel Summa canister over a 30-minute sample duration that encompassed the soil gas sampling event. The ambient air sample was analyzed for VOCs via USEPA Method TO-15.

2.3.1 Soil Gas Analytical Results

The soil gas analytical results were compared to the PADEP Nonresidential Near-Source Soil Gas Statewide Health Standard Vapor Intrusion Screening Values (NSG-NR), Nonresidential Sub-Slab Soil Gas Statewide Health Standard Vapor Intrusion Screening Values (SSG-NR), Residential Near-Source Soil Gas Statewide Health Standard Vapor Intrusion Screening Values (NSG-R), and Residential Sub-Slab Soil Gas Statewide Health Standard Vapor Intrusion Screening Values (SSG-R).

Review of the soil gas results identified that no VOCs exceeded the residential or non-residential screening values, except for acrolein. Acrolein was detected in exceedance of the SSG-R only, at concentrations ranging from 1.23 micrograms per cubic meter (ug/m3) to 2.41 ug/m3, which exceed the SSG-R of 0.8 ug/m3. TCE was detected at very low concentrations, but orders of magnitude lower than the screening values.

Table 1 summarizes the individual constituent results of the soil sample analyses. The laboratory data package for the soil sampling is provided as **Appendix A**.

2.3.2 Ambient Air Analytical Results

The ambient air results are also summarized on **Table 1**. Low-level VOC detections were noted for a couple compounds, but all well below the soil gas screening values. Further review of the ambient air data identified no exceedances to the PADEP Indoor Air Statewide Health Standard Vapor Intrusion Screening Values (residential and nonresidential).

The laboratory data package for the ambient air sampling is provided as **Appendix A**.

2.4 Groundwater Sampling

Groundwater sampling was conducted at the shallow monitoring wells that were previously installed on the subject property as part of the regional groundwater investigation (EPA-04, R-16S, and R-17S). The monitoring well locations are depicted on **Figure 1**.

Prior to sampling activities, organic vapor readings of the well head were collected with a photoionization detector (PID) and groundwater level measurements were collected from the permanent monitoring wells. Groundwater level measurements obtained from the monitoring wells were converted to groundwater elevations for assessing groundwater flow direction.

The following table provides a summary of the groundwater elevation information.

Well ID	PID Reading (ppm)	Depth to Water (feet bgs)	Top of Casing Elevation (feet amsl)	Groundwater Elevation (feet amsl)
EPA-04	2.1	20.01	287.44	267.43
R-17S	0.0	17.72	286.20	268.48
R-16S	0.0	14.41	271.70	257.29

ppm = parts per million
feet amsl = feet above mean sea level

A groundwater contour map is provided as **Figure 4**.

Purging of the monitoring wells prior to sampling was conducted using modified low flow (two to three well volumes) purging methodologies and a submersible pump. Groundwater was purged from the monitoring well until stabilization of indicator parameters described below was achieved. The pumping rate was in the range of approximately 100 to 500 milliliters (ml)/minute to minimize degassing and aeration. A groundwater sample was collected following stabilization of parameters using a pump specialized for low-flow sampling. Field parameters measured before and during the sampling consisted of pH, specific conductance, oxidation-reduction potential (ORP), temperature, dissolved oxygen, and turbidity. A copy of the field sampling forms is included in **Appendix B**.

Groundwater samples were collected and analyzed for VOCs via USEPA Method 8260.

For quality assurance/quality control (QA/QC) purposes, one equipment rinsate (field blank) sample was collected from the decontaminated equipment and analyzed for VOCs. In addition, one trip blank remained with the samples from collection through analysis at the lab. The trip blank sample was analyzed for VOCs.

The groundwater samples were placed in laboratory supplied containers, preserved on ice, and transported to a PADEP-certified laboratory under property chain-of-custody procedures.

2.4.1 Groundwater Analytical Results

The results of the groundwater samples analysis were compared to the PADEP Nonresidential Non-Use Aquifer Groundwater Medium Specific Concentrations (NRNAMSC), Nonresidential Used Aquifer Groundwater MSC (NRUAMSC), Residential Non-Use Aquifer Groundwater MSC (RNAMSC), Residential Used Aquifer Groundwater MSC (RUAMSC), Nonresidential Groundwater Vapor Intusion Screening Value (VI-GW-NR), and Residential Groundwater Vapor Intrusion Screening Value (VI-GW-R).

Review of the soil analytical results identified that no VOCs exceeded the most stringent PADEP Medium Specific Concentrations (MSCs).

TCE was detected at two of the three sample locations; however, the concentrations were below the MSCs, and well below the groundwater vapor intrusion screening values.

Table 2 summarizes the individual constituent results of the groundwater sample analyses. The laboratory data package for the soil sampling conducted during the installation of the soil borings is provided as **Appendix C**.

2.5 Data Usability

A review of the laboratory analytical data reports indicates that the data collected throughout the investigation is acceptable and the data is useful. The reporting limits and minimum detection limits were acceptable to evaluate compliance with the applicable soil gas and groundwater samples collected. Any items noted in the laboratory non-conformance summaries were not deemed significant and did not affect the findings of this report.

2.6 Investigation-Derived Waste Management

Purge development water did not register readings with the PID, or exhibit odors or a sheen; therefore, it was discharged through activated carbon to the ground surface in the immediate vicinity of the monitoring well.

Disposable sampling equipment including gloves, bags, paper towels, etc. that encountered environmental media were double bagged and disposed of as municipal trash in a dumpster as general refuse.

3.0 CONCLUSIONS AND RECOMMENDATIONS

VERTEX has performed a Phase II LSI to characterize soil gas and groundwater conditions at the property located at 56 Walnut Street in Chalfont, Bucks County, Pennsylvania. The objective of the Phase II LSI was to evaluate the subject property conditions relative to the documented TCE-contaminated groundwater, resulting from an off-site source (North Penn – Area 5 Superfund site), that was previously identified on the subject property. Based on the findings of the Phase II ESA, the following was identified at the subject property.

Soil Gas Findings

- No VOCs exceeded the residential or non-residential screening values, except for acrolein. Acrolein was detected in exceedance of the SSG-R only. Acrolein is not a contaminant of concern at the subject property. In addition, acrolein is a typical laboratory contaminant associated with air canisters used for sampling. Furthermore, the acrolein detections do not exceed the non-residential screening values, which are the most applicable to the subject property based on the proposed commercial redevelopment.

- The on-site contaminant of concern (TCE) was detected at very low concentrations in the soil gas samples, but at concentrations lower than the screening values by orders of magnitude.

Based on the soil gas findings, there is a low potential for vapor intrusion at the subject property.

Groundwater Findings

- Groundwater was identified at the following depths: 14.41 feet bgs (R-16S), 17.72 feet bgs (R-17S), and 20.01 feet bgs (EPA-04).

- No VOCs exceeded the most stringent PADEP MSCs.

- TCE was detected in two of three samples locations, but the concentrations were below the MSCs, and well below the groundwater vapor intrusion screening values.

Overall, concentrations of TCE in shallow groundwater are low and currently below regulatory criteria. The results are consistent with historical sampling data generated during the USEPA's investigations. The data does not indicate the potential for groundwater impacts to migrate beyond the creek to the west; therefore, no further groundwater sampling (west of the creek) is recommended.

Detections of VOCs in groundwater were well below the vapor intrusion screening values; therefore, there is low risk of vapor intrusion.

During VERTEX's investigation, groundwater was encountered at depths ranging from 14.41 to 20.01 feet below grade; therefore, significant dewatering and impacted water management is not anticipated during the proposed redevelopment activities.

Recommendations

Based on the groundwater and soil gas findings, there is a low potential for vapor intrusion at the subject property. The results do not indicate that active vapor mitigation (i.e., sub-slab depressurization system (SSDS)) or passive mitigation (i.e., vapor barrier) would be required in the proposed commercial buildings.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

RE: Northern Red-bellied Cooter Habitat Assessment Report
PAC250095.00 Project
New Britain Township, Bucks County, Pennsylvania
PFBC SIR# 61749

Dear Ms. Gipe:

The following report details the results of a Northern Red-bellied Cooter (*Pseudemys rubriventris*) Habitat Assessment conducted at the above-referenced site on August 6, 2025, on behalf of Bohler. Included in the following is a description of study methodologies and results along with the supportive information provided as enclosures,.

Project Background

Skelly and Loy, Inc., *A Terracon Company* (Skelly and Loy), conducted a Phase 1 Northern Red-bellied Cooter Habitat Assessment on August 6, 2025, for the proposed PAC250095.00 land development project in New Britain Township, Bucks County, Pennsylvania. Due to the proposed project specifications, a Pennsylvania Natural Diversity Inventory search (PNDI Search No. 843502_1) was conducted by the applicant and a potential conflict was identified with a species under the jurisdiction of the Pennsylvania Fish and Boat Commission (PFBC). Subsequently, the PFBC requested a Northern Red-bellied Cooter Habitat Assessment in their July 10, 2025, Species Impact Review (SIR) letter (SIR# 61749). The study area for the habitat assessment included all lands within the approximately 105-acre project area.

Project Area and Description

The PAC250095.00 Project is located between County Line Road and Schoolhouse Road, New Britain Township, Bucks County, Pennsylvania (40.279817, -75.243617°), as depicted

on the Project Location Map (Enclosure A). The West Branch Neshaminy Creek flows northeast through the general center of the project area. The proposed project includes the construction of commercial facilities and associated infrastructure. The project area is currently utilized as an agricultural property.

Natural History of Listed Species

The Northern Red-bellied Cooter (RBC) is a large aquatic turtle that is protected as a state-threatened species under the Pennsylvania Fish and Boat Code. The Pennsylvania Fish and Boat Commission (PFBC) is the state regulatory agency with jurisdiction over the Pennsylvania Fish and Boat Code. Bucks County is located within the extant range of the species. The turtle typically inhabits permanent bodies of water such as streams, rivers, ponds, and lakes. The species nests up to 1,000 feet from aquatic habitats in fields, shrublands, roadside openings, and even gravel parking lots.

Habitat Assessment Methodology

Brandon M. Ruhe (a PFBC Qualified RBC Surveyor) of Skelly and Loy conducted the habitat assessment. Prior to the field investigation, topographic maps and aerial photographs of the project area were reviewed. This included review of historical aerial imagery from the 1930's to present. The habitat investigation was conducted on August 6, 2025. The assessment focused on any apparent waters/wetlands and upland habitats found within the proposed project boundaries. An aerial photograph of the project area with selected habitat assessment results is included as Enclosure B. A proposed site development plan is included as Enclosure C. Refer to Enclosure D for photographs of assessed habitats and general site conditions.

Results

The subject site is embedded within a suburban landscape. The study area consisted of rural residence, agricultural lands (row crops), and undeveloped riparian woodlands. Commercial properties are situated to the north, west, and south of the study area. Residential properties are located to the east. The West Branch Neshaminy Creek flows northeast through the study area.

Eight aquatic habitat features are contained within the study area. Five of these habitats are shallow riparian depressions that were dry with firm substrates at the time of the investigation. As such, these basins are not considered Northern Red-bellied Cooter habitat. Three aquatic features (all watercourses) with surface water were encountered during the investigation. Refer to Enclosure C for locations of wetlands and watercourses on a proposed site development plan.

West Branch Neshaminy Creek (WBNC)

WBNC is a large (approximately 50 feet bankfull width) stream that flows generally northeast through the study area. Approximately 3,000 linear feet of WBNC are contained within the project area. The majority of WBNC within the study area was shallow (<18 inches in water depth) with a rocky streambed. Several deep pools with water depths >18 inches were observed in the eastern, central, and western portions of the WBNC. Submerged aquatic vegetation and beds of emergent aquatic plants were observed in portions of the WBNC, with the greatest extent of these habitat features near the Schoolhouse Road bridge. Exposed rocks and logs along the streambank were noted throughout the WBNC study area. WBNC is considered potentially suitable RBC habitat due to the presence of water >18 inches in depth, presence of submerged aquatic vegetation, and presence of potential basking habitat.

Most upland terrain within 300 feet of WBNC contained areas unsuitable as NRBC potential nesting habitat and were generally characterized as heavily-shaded agricultural fields (corn) or riparian woodland. Two upland areas near WBNC maintained characteristics of potentially suitable nesting habitat. The easternmost potentially suitable NRBC nesting habitat (NA1; covering an estimated 0.3-acre) was observed along Schoolhouse Road, extending approximately 320 feet from the southern bank of the WBNC southeast towards Walnut Street (approximate center point 40.280922°, -75.238744°). This roadside meadow contained various grasses growing on a mix of native soil and gravel. A second potentially suitable NRBC nesting area (NA2; covering an estimated 0.6-acre) was observed on the north side of WBNC. This area extended west from the project area boundary for approximately 850 feet (approximate center point 40.280868° -75.242652°). This narrow band of meadow was dominated by goldenrods and was situated along a sewer line right-of-way. No depredated or active turtle nests were observed in the area during the habitat assessment.

Unnamed Tributary 1 (UNT1) to WBNC

UNT1 is a shallow (<6 inches in typical depth) watercourse that flows south to the WBNC from the northcentral boundary of the project area. This rocky and narrow (<3 feet in width) watercourse was contained within a wooded hedgerow between two agricultural fields, and is approximately 900 feet in length. Approximately 300 feet north of the WBNC surface flow disappeared and was diverted underground. Due to its small size, shallow surface water, and rocky streambed, UNT1 is not potentially suitable aquatic NRBC habitat.

Unnamed Tributary 2 (UNT2) to WBNC

UNT2 is a shallow (<6 inches in typical depth) watercourse that flows north to the WBNC from the southern boundary of the project area. This rocky and narrow (<3 feet in width) watercourse was contained within an incised bank in a narrow woodlot between two agricultural fields. Due to its small size, shallow surface water, and rocky streambed, UNT2 is not potentially suitable NRBC habitat.

Amphibians and Reptiles Observed

The following species of amphibians and reptiles were observed during the habitat investigation:

- Gray Treefrog (*Hyla versicolor*)
- Bullfrog (*Lithobates catesbeianus)*
- Green Frog (*Lithobates clamitans*)

Summary & Recommendations

An NRBC habitat assessment was conducted by Skelly and Loy's Brandon M. Ruhe, a Qualified NRBC Surveyor (as designated by the PFBC). This assessment was completed in accordance with regulatory agency recommendations and previous experience in conducting NRBC research. Based upon the scope of work and the information described above, Skelly and Loy relates the following observations and opinions:

1) WBNC contains potentially suitable NRBC aquatic habitat.

2) Two upland meadows found within the project area contain potentially suitable NRBC nesting habitat.

3) Potentially suitable aquatic and nesting habitats will not be directly impacted by the project.

4) The applicant has proactively designed the project to avoid potentially suitable NRBC habitats as displayed in Enclosure C (proposed site development plan).

5) Based upon these findings, the applicant requests clearance for the project.

We appreciate your time and attention related to this important project and are respectfully requesting written concurrence with our findings. Please contact Brandon Ruhe (610-844-5440) or Ben Berra (717-576-1168) if you have any questions regarding this summary report.

Sincerely,

RE: Species Impact Review (SIR) – Rare, Candidate, Threatened and Endangered Species
PNDI Search No. 843502_1
PAC250095.00 - Proposed Development
New Britain Township: BUCKS County

Dear Mr. Ruhe:

This responds to follow-up information provided by you related to our letter of July 10, 2025 requesting additional investigations to determine the potential of the proposed development to impact the Northern Red-bellied Cooter (*Pseudemys rubriventris*), state threatened. You evaluated the habitats on site to determine their potential to support the species of concern. According to the report, the site does contain potential habitat for the Northern Red-bellied Cooter in portions of the West Branch of the Neshaminy Creek. Additionally you identified associated upland areas providing potential nesting habitat. The presence of the Northern Red-bellied Cooter in these habitats has not been confirmed.

As displayed on the project layout dated 10/13/2025 (Bohler Engineering), the development will not encroach on any of these identified potential habitat areas. The project design includes buffers to the creek and a set-aside open space that includes the potential nesting habitat. If the layout is built as proposed with respect to these potential habitats, then I do not foresee any adverse impacts to the Northern Red-bellied Cooter from the proposed development.

This response represents the most up-to-date summary of the PNDI data and our files and is valid for two (2) years from the date of this letter. An absence of recorded species information does not necessarily imply species absence. Our data files and the PNDI system are continuously being updated with species occurrence information. Should project plans change or additional information on listed or proposed species become available, this determination may be reconsidered, and consultation shall be re-initiated.

If you have any questions regarding this review, please contact Kathy Gipe at 814-359-5186 or c-kgipe@pa.gov and refer to the SIR # 61749. Thank you for your cooperation and attention to this important matter of species conservation and habitat protection.

Sincerely,

Christopher A. Urban, Chief
Natural Diversity Section

RESPONSE TO QUESTION(S) ASKED

Q1: Accurately describe what is known about wetland presence in the project area or on the land parcel. "Project" includes all features of the project (including buildings, roads, utility lines, outfall and intake structures, wells, stormwater retention/detention basins, parking lots, driveways, lawns, etc.), as well as all associated impacts (e.g., temporary staging areas, work areas, temporary road crossings, areas subject to grading or clearing, etc.). Include all areas that will be permanently or temporarily affected -- either directly or indirectly -- by any type of disturbance (e.g., land clearing, grading, tree removal, flooding, etc.). Land parcel = the lot(s) on which some type of project(s) or activity(s) are proposed to occur.
Your answer is: Someone qualified to identify and delineate wetlands (holding a natural resource degree or equivalent work experience) has investigated the site, and determined that wetlands ARE located in or within 300 feet of the project area. (A written report from the wetland specialist, and detailed project maps should document this.)

Q2: The proposed project is in the range of the Indiana bat. Describe how the project will affect bat habitat (forests, woodlots and trees) and indicate what measures will be taken in consideration of this. Round acreages up to the nearest acre (e.g., 0.2 acres = 1 acre).
Your answer is: The project will affect 1 to 39 acres of forests, woodlots and trees.

Q3: Aquatic habitat (stream, river, lake, pond, etc.) is located on or adjacent to the subject property and project activities (including discharge) may occur within 300 feet of these habitats?
Your answer is: Yes

Q4: Is tree removal, tree cutting or forest clearing of 40 acres or more necessary to implement all aspects of this project?
Your answer is: No

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission
RESPONSE:
No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources
RESPONSE:
No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission
RESPONSE:
Further review of this project is necessary to resolve the potential impact(s). Please send project information to this agency for review (see WHAT TO SEND).

PFBC Species: (Note: The Pennsylvania Conservation Explorer tool is a primary screening tool, and a desktop review may reveal more or fewer species than what is listed below.)

Scientific Name	Common Name	Current Status
Sensitive Species**		Threatened

U.S. Fish and Wildlife Service
RESPONSE:

No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq. is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

* Special Concern Species or Resource - Plant or animal species classified as rare, tentatively undetermined or candidate as well as other taxa of conservation concern, significant natural communities, special concern populations (plants or animals) and unique geologic features.
** Sensitive Species - Species identified by the jurisdictional agency as collectible, having economic value, or being susceptible to decline as a result of visitation.

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, upload* or email the following information to the agency(s) (see AGENCY CONTACT INFORMATION). Instructions for uploading project materials can be found here. This option provides the applicant with the convenience of sending project materials to a single location accessible to all three state agencies (but not USFWS).
*If information was requested by USFWS, applicants must email, or mail, project information to IR1_ESPenn@fws.gov to initiate a review. USFWS will not accept uploaded project materials.

Check-list of Minimum Materials to be submitted:
____Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.
____A map with the project boundary and/or a basic site plan(particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)
In addition to the materials listed above, USFWS REQUIRES the following
____**SIGNED** copy of a Final Project Environmental Review Receipt

The inclusion of the following information may expedite the review process.
____Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)
____Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. Two review options are available to permit applicants for handling PNDI coordination in conjunction with DEP's permit review process involving either T&E Species or species of special concern. Under sequential review, the permit applicant performs a PNDI screening and completes all coordination with the appropriate jurisdictional agencies prior to submitting the permit application. The applicant will include with its application, both a PNDI receipt and/or a clearance letter from the jurisdictional agency if the PNDI Receipt shows a Potential Impact to a species or the applicant chooses to obtain letters directly from the jurisdictional agencies. Under concurrent review, DEP, where feasible, will allow technical review of the permit to occur concurrently with the T&E species consultation with the jurisdictional agency. The applicant must still supply a copy of the PNDI Receipt with its permit application. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. The applicant and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at https://conservationexplorer.dcnr.pa.gov/content/resources.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a preliminary screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

Capacity Certification

To Whom it May Concern:

The Chalfont-New Britain Township Joint Sewer Authority (CNBTJSA) certifies that there is treatment capacity to receive and treat the maximum daily flow of 30,000 gallons per day (120 EDU's) from the above referenced property. This waste load will not create a hydraulic or nutrient overload in our treatment works. Nor will it create a projected 5 year nutrient or hydraulic overload in our treatment works. We have sufficient capacity in our treatment works to serve this development.

In the event that the Pennsylvania Department of Environmental Protection or any other regulatory body or government agency shall restrict or ban the CNBTJSA from connecting new customers to it's facilities, the CNBTJSA does not represent or warrant that it will be able to accept sewage flows from the property described herein in the future.

If you have any questions or require additional information please feel free to contact me.

RE: Availability of Water Capacity
Walnut Street and County Line Road
New Britain Township, PA 18914

Dear Ms. Jordyn Heller,

The Authority has available water capacity to supply the proposed property, provided water capacity in our system is available at the time of final approval by the Authority. This letter does not imply that North Penn Water Authority agrees to provide Final Approval: only that the water capacity is available. The developer shall submit plans to determine the number of EDUs and how the property will be serviced.

This commitment is valid for up to one year from the date of this letter. After this date, the applicant will need to resubmit another water capacity request. If changes were made that impacts water use or discharge, then the applicant should resubmit a request for the availability of water.

If you have any questions or need additional information regarding this matter, please do not hesitate to contact me.

Sincerely,
NORTH PENN WATER AUTHORITY

In reference to the above-mentioned project, Verizon will supply the necessary communication service if we receive the proper information and payments listed below.

1. One full set of development plans.
2. Mailing addresses for each building when they become available to start to establish the 911 database.
3. Documentation granting all required Right-Of-Way easements at no cost to Verizon.
4. Where applicable, a delivery of a prepayment in aid of construction in an amount equal to 60% of Verizon's construction costs. The prepayment is subject to a partial or full refund based on the volume of Verizon services purchased (as defined by Verizon) as of the tenth anniversary of the completion of construction.

For planning purposes, the average cost to provide new facilities is typically $1,000-$3,000 per line. The actual cost will depend on such factors as lot size, the proximity of existing feeder facilities, the existing feeder capacity, terrain and other environmental conditions (e.g., railroads, waterways). Please contact Verizon if you require a more precise estimate of construction costs for your project. Please be aware that since customers have a variety of choices for telecommunications service (e.g., cable, wireless, voice over Internet); it is likely that, even after ten years, your prepayment may not be fully refunded.

Executive Summary

SLR International Corporation (SLR) has prepared a pre-construction noise study at the request of The Hanover Company (Hanover), for the proposed Chalfont Development in New Britain Township, Pennsylvania (Bucks County). The Chalfont Development is proposed to have three independent warehouses with 24-hour operations during the weekdays. Noise events to be considered are semi-trucks arriving and departing, backup alarms while trailers are backed-up to the loading docks, and idling engines while the trucks are being loaded/unloaded. There are also rooftop HVAC equipment and transformers located on and near each warehouse.

New Britain Township has a property line noise ordinance within the Township of New Britain, PA Municipal Code (Chapter 10, Part 1, Section 10-102). This ordinance limits the maximum sound pressure level at the property line to "…*Eighty decibels dB(A) between the hours of 9:00 p.m. and 7:00 a.m., prevailing time."* There are no other known federal, state, county, or local sound level ordinances applicable to the proposed Chalfont Development.

A three-dimensional sound propagation model of the proposed development was created to assess predicted sounds levels from the development at the property lines (PL) of the site. As a conservative approach to assessing compliance with the Township noise ordinance, this model assumes that all identified sources are operating at the same time and at full load for each warehouse. It is unlikely that all of the modeled sources will be operating at full load at the same time during anticipated normal operation of the development. Although exempt from the noise ordinance based on Chapter 10, Part 1, Section 10-104, trailer backup alarms were also included in calculating the development worst-case sound level contributions at the PL. **Table A** shows a summary of the calculated worst-case A-weighted sound level contribution from the proposed Chalfont Development at each PL measurement location, the measured nighttime ambient sound levels, and predicted future worst-case sound levels at each PL measurement location alongside the Township ordinance noise limits.

Table A: Measured and Predicted Sound Pressure Levels – Worst-Case

Property Line	Direction	Measured Nighttime Ambient Sound Pressure Level	Predicted Future Development Nighttime Sound Pressure Level Contribution	Cumulative: Existing + Future Development Sound Pressure Level	Township Noise Ordinance Limit	Compliance with Township Noise Ordinance?
		L_n dB(A)	dB(A)	dB(A)	dB(A)	Yes/No
PL 1	NE	53.2	58.7	**59.8**	80	**Yes**
PL 2	SW	67.5	66.2	**69.9**	80	**Yes**
PL 3	NW	48.6	67.8	**67.9**	80	**Yes**

As shown in **Table A** and in **Figure A-3**, the Chalfont Development is predicted to be compliant with the New Britain Township Noise Ordinance at all property line locations.

1.0 Introduction

SLR International Corporation (SLR) has prepared a pre-construction noise study at the request of The Hanover Company (Hanover), for the proposed Chalfont Development in New Britain Township, Pennsylvania (Bucks County). The Chalfont Development is proposed to have three independent warehouses with 24-hour operations during the weekdays. Noise events to be considered are semi-trucks arriving and departing, backup alarms while trailers are backed-up to the loading docks, and idling engines while the trucks are being loaded/unloaded. There are also rooftop HVAC equipment and transformers located on and near each warehouse.

2.0 Sound Level Criterion

Chapter 10, Part 1, Section 10-102 of the Township of New Britain, PA Municipal Code states the following noise limitation:

> *"§ 10-102Noise Limit.*
>
> *[Ord. 02-09-02, 9/9/2002, § 2]*
>
> 1. *No person shall create or allow the creation of any noise or operate or cause to be operated any source of sound on property owned, leased, occupied or otherwise controlled by such person and/or on a public street or in a public park which causes the sound level, when measured at or beyond the boundaries of the lot, parcel, tract or property on which such activities take place to exceed the noise levels specified below:*
>
>   A. *Eighty decibels dB(A) between the hours of 9:00 p.m. and 7:00 a.m., prevailing time."*

There are no other known federal, state, county, or local sound level ordinances applicable to the proposed Chalfont Development.

3.0 Description of Site and Facility

3.1 Description of Site

The Chalfont Development is located at 40°16'46.26"N, 75°14'38.19"W. The site is surrounded by County Line Road to the southwest, Walnut Street to the southeast, Schoolhouse Road to the northeast, and an industrial park to the northwest. The West Branch of the Neshaminy Creek cuts through the center of the site from the northeast to the southwest. Industrial and manufacturing facilities surround the site on the northwest, southwest, and southeast. A children's day care facility and residential homes are located to the northeast of the property.

3.2 Description of Warehouse Operations

The proposed site will have three warehouses which are anticipated to operate 24-hours a day during weekdays. **Table 3-1** below shows the anticipated average and peak AM and PM semi-truck traffic for each warehouse.

Table 3-1: Anticipated Semi-Truck Trips per Warehouse

Time Period	Warehouse Building #	Semi-Truck Trips		
		Total	Enter	Exit
Average Weekday	1	204	102	102
	2	60	30	30
	3	69	35	34
Weekday AM Peak Hour	1	17	10	7
	2	5	3	2
	3	6	3	3
Weekday PM Peak Hour	1	20	11	9
	2	6	3	3
	3	7	4	3

During operations, semi-trucks are anticipated to park and idle in the loading bays for each warehouse and backup alarms will occur when docking trailers.

3.3 Description of Warehouse Stationary Equipment

Warehouses 2 and 3 are anticipated to have two rooftop make-up air units (MAUs), while warehouse 1 is anticipated to have three rooftop MAUs. All warehouses are anticipated to have two exhaust fans and one 3,000 kVA transformer.

4.0 Pre-Construction Ambient Sound Level Survey

A pre-construction ambient sound level survey was conducted by Jeff Bregar of SLR from March 10 to 11, 2026, with the intention of capturing existing ambient sound conditions at the closest property lines (PLs) near the proposed Chalfont Development.

4.1 Measurement Locations

Measurements were conducted at three locations near the property line to the northwest, southwest, and northeast of the site. These measurement locations were chosen to best represent existing ambient sound levels at multiple property lines around the site. The measurement locations and their closest neighboring receiver type are summarized in **Table 4-1**. The direction from the approximate center of the proposed site to the measurement locations are shown. The measurement locations are shown in **Figure A-1**.

Table 4-1: Summary of Measurement Locations

Measurement Location	Nearest PL Measurement Location	Neighboring Receiver Type
ML 1	NE	Residential
ML 2	SW	Industrial
ML 3	NW	Industrial

4.2 Measurement Equipment

Sound level meter equipment used during the sound study included the following instruments:

- Larson Davis Model 831 SLMs; Type 1; s/n 0002443, 0001736, 0004772
- Larson Davis Model CAL200 Calibrator; s/n 16644

Windscreens were used on the measurement microphones. The sound level meters were field-calibrated before and after measurement intervals, showing no significant change in sensitivity over the survey period. All instruments have current laboratory certification that can be provided upon request. Measurements were conducted five feet above the ground.

4.3 Weather Conditions

Weather conditions were appropriate for an outdoor sound level study. A summary of the weather conditions is shown in **Table 4-2**.

Table 4-2: Summary of Weather Conditions

Date	March 10 – 11, 2026
Temperature Range	49°F – 84°F
Relative Humidity Range	26 % – 71%
Wind Speed (Average)	0-9 mph
Wind From	Variable
Sky Condition	Clear
Ground Condition	Damp to Dry

4.4 Measurements Methodology and Observations

Sound level measurement duration and observations are summarized in **Table 4-3**. Sound levels were measured using the slow meter response and A-weighting (dBA). Data were collected in 1/3-octave bands and recorded in 10-second and 15-minute sampling periods.

Table 4-3: Summary of Measurement Durations and Observations

Measurement Location (ML)	Measurement Duration HH:MM	Source Observations During Measurements
ML 1	24:27	Observed noise sources included traffic along Walnut Street and Schoolhouse Road, backup alarms, noise from industrial facility to the south, wind, and birds
ML 2	24:01	Observed noise sources included traffic along County Line Road
ML 3	24:36	Observed noise sources included traffic along County Line Road, backup alarms, faint noise from industrial facility to the north, wind, fallen leaves rustling, and birds

4.5 Measurement Results

The sound levels measured at each position were used to calculate overall daytime average levels (L_d), the nighttime average levels (L_n). Typically, daytime is considered the period from 7:00 a.m. to 10:00 p.m., and nighttime from 10:00 p.m. to 7:00 a.m. However, to match the timeframe outlined in the Township ordinance, daytime will be considered the period from 7:00 a.m. to 9:00 p.m., and nighttime from 9:00 p.m. to 7:00 a.m. for this analysis. The pre-construction ambient sound level survey results are summarized in **Table 4-4**.

Table 4-4: Summary of Ambient Sound Level Measurements

Property Line	Measurement Location (ML)	Pre-Construction Ambient Sound Pressure Level, dBA	
		L_d, Daytime	L_n, Nighttime
NE	ML 1	57.2	53.2
SW	ML 2	73.1	67.5
NW	ML 3	49.1	48.6

Level vs. time graphs from each measurement location are included in **Appendix B**. The blue line represents the 10-second L_{eq}; the red line represents the 15-minute L_{eq}; and the green line represents the 15-minute L_{90}. The L_{90} sound level is the level exceeded 90% of the time during a measurement interval. Each dataset line represents the A-weighted sound level. A spectrogram showing frequency vs. time is presented below the level vs. time graph, which identifies changes in specific frequencies throughout the duration of the measurement. The L_d ambient sound levels at the measurement locations ranged from 49.1 to 73.1 dB(A), while the L_n ambient sound levels ranged from 48.6 to 67.5 dB(A).

5.0 Proposed Site Noise Study

5.1 Noise Model Development

A three-dimensional computer sound propagation model (noise model) was developed to analyze the sound contributions from the proposed Chalfont Development. The model was developed using CadnaA, version 2026 MR 1 (Build 215.5625), a commercial noise modeling package from DataKustik GmbH. The software considers spreading losses, ground and atmospheric effects, shielding from barriers and buildings, reflections from surfaces and other sound propagation properties. The software is based on published engineering standards. The ISO 9613-2 standard was used for air absorption and other sound propagation calculations.

To be conservative, foliage was not included in the model. The terrain was modeled based on United States Geological Survey (USGS) topographical data at a resolution of 10 by 10 meters. A temperature of 20 degrees Celsius and 70 percent relative humidity were used for the atmospheric absorption calculations. The ground at the proposed warehouses was modeled as mostly reflective, with an absorption coefficient of 0.1, while all other ground was modeled as partially absorptive, with an absorption coefficient of 0.5, which would be representative of a mix of soft and hard ground. The number of reflections was set to 2 for the model.

5.2 Data and Assumptions

Table 5-1 shows the quantity of each sound source used for each proposed warehouse in the model. Backup alarm sources were based on the highest peak number of semi-trucks entering the site and evenly spaced across the available loading dock locations. Two semi-trucks were modeled as entering and exiting the site at the same time to be conservative. Moving semi-trucks were modeled at a speed of roughly 15 miles-per-hour (mph) while on-site. Per client request, semi-trucks were modeled as idling in each available loading dock location.

At the time of this report, a plot plan showing the locations of stationary equipment was not available. Rooftop MAUs and exhaust fans were modeled in the center of the warehouse roofs, spaced evenly across the rooftop. Transformers were modeled towards the ancillary semi-truck parking towards the rear of each warehouse. **Figure A-2** shows the assumed equipment locations.

As a conservative approach to assessing compliance with the New Britain Township noise ordinance, this model assumes that all of the following identified sources are operating at the same time and at full load for each warehouse. It is unlikely that all of the modeled sources will be operating at full load at the same time during anticipated normal operation of the development. Although exempt from the noise ordinance based on Chapter 10, Part 1, Section 10-104, trailer backup alarms were also included in calculating the development worst-case sound level contributions at the PLs.

Table 5-2 shows the sound power levels used as inputs to the model for the proposed development equipment and anticipated semi-truck activities. Manufacturer data (as available) were used to determine sound power levels for the proposed equipment. When manufacturer data was not available, sound levels from SLR's database of past measurements and available research were used in the model.

5.3 Noise Model Results

Table 5-3 shows a summary of the calculated worst-case A-weighted sound level contribution from the proposed Chalfont Development at each PL measurement location. The table also shows the measured nighttime ambient sound levels and predicted overall sound levels at each PL measurement location alongside the Township ordinance noise limits. The table indicates that the predicted worst-case cumulative (development plus existing ambient) sound levels at the PLs range from 59.8 to 69.9 dB(A).

Table 5-3: Measured and Predicted Sound Pressure Levels – Worst-Case

Property Line	Direction	Measured Nighttime Ambient Sound Pressure Level	Predicted Future Development Nighttime Sound Pressure Level Contribution	Cumulative: Existing + Future Development Sound Pressure Level	Township Noise Ordinance Limit	Compliance with Township Noise Ordinance?
		L_n dB(A)	dB(A)	dB(A)	dB(A)	Yes/No
PL 1	NE	53.2	58.7	**59.8**	80	**Yes**
PL 2	SW	67.5	66.2	**69.9**	80	**Yes**
PL 3	NW	48.6	67.8	**67.9**	80	**Yes**

Figure A-3 shows a color contour map of the predicted A-weighted development worst-case contribution sound level (excluding ambient sound) during operations. As shown in **Table 5-3** and in **Figure A-3**, the Chalfont Development is predicted to be compliant with the New Britain Township Noise Ordinance at all property line locations under a worst-case condition.

6.0 Conclusion

SLR has completed a pre-construction noise study for the proposed Chalfont Development, located in New Britain Township, Pennsylvania (Bucks County). SLR developed a sound propagation model to predict the development sound contribution at the closest PLs surrounding the proposed development. The calculated cumulative sound level (development plus existing ambient) during worst-case operation ranges from 59.8 to 69.9 dB(A) L_{eq} at the PL measurement locations. As shown in **Table 5-3** and **Figure A-3,** the Chalfont Development is predicted to be compliant with the New Britain Township Noise Ordinance at all property line locations.
